

On Touching Grass

Will BL
william@williambl.com

Abstract—Computer People are often told to ‘touch grass.’ This activity has very little presence in the literature, so we decided to do some experimentation ourselves. We discuss the results of this experimentation.

Index Terms—Touching Grass, Going Outside

I. INTRODUCTION

Computer People are often told to ‘touch grass.’ This activity has very little presence in the literature, so we decided to do some experimentation ourselves.

II. BACKGROUND

“Touching Grass” can be defined in terms of the lambda-calculus:

$$\lambda \text{ toucher } . \lambda \text{ grass } . (\text{touch } \text{toucher } \text{grass}) \quad (1)$$

Defining touch is beyond the scope of this paper, and also beyond us.

III. METHOD

We went outside.

IV. RESULTS

Immediately after stepping outside, we realised we don’t really care about computer science any more. Sorry 🙄

The sky is really pretty today. The clouds look like they’re painted. The sun’s warmth and the coolness of the breeze together on my skin make me feel more alive than these spiritless machines ever could.

The rest of this paper intentionally left blank.
